

RapidLock System

Manufactured by the world's largest and most technologically advanced manufacturer of waterproofing membranes, Carlisle Construction Materials, Viking Enviroclad RapidLock is a revolutionary roofing system where the membrane attachment method is fully adhered, without the use of adhesives. Enviroclad RapidLock is a hook and loop attachment system developed alongside VELCRO® Brand Securable Solutions. The insulation board acts as the hook while the specialised fleece-back membrane acts as the loop, creating the industry's first adhesive-less, fully-adhered attachment system.

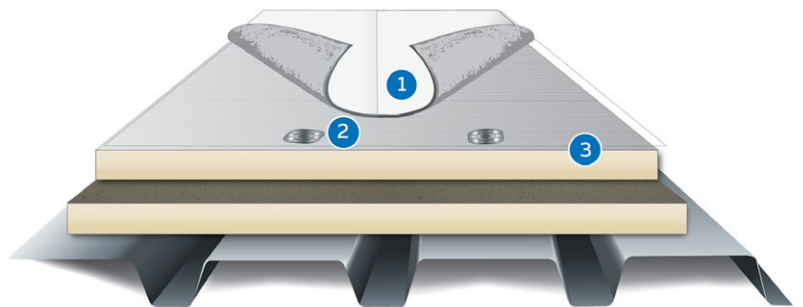

RapidLock's easy installation provides a consistent application that eliminates the variability associated with adhesive cure times or installation temperature restrictions. Enviroclad RapidLock's exceptional performance makes it ideal for both re-roofing and new construction applications.

RapidLock System's Components

The RapidLock system comprises of specialty fleece-back membrane and Coverboard Polyiso Insulation. The membrane acts as the hook while the polyiso insulation acts as the loop.

- 1 Viking Enviroclad RapidLock Membrane
- 2 Insulation Fasteners and Plates
- 3 Viking RapidLock Coverboard PolyisoTechnology

Why Choose a RapidLock System?

No application temperature restrictions, great for installation any time of year

VOC- and odour-free, will not disrupt occupied buildings

Labour saving adhesive-less membrane attachment system

Integrated with a factory-applied removable slip sheet for ease of installation

Excellent resistance to hail and punctures

33% greater puncture resistance than 1.52mm thick membrane

Extraordinary wind uplift resistance of 10.8kpa

Testimonials from Viking Approved Applicators

“We recently completed a project involving the replacement of approximately 240 lineal metres of box gutters, each 400 mm wide with 200 mm upstands on both sides. Due to the limited working space, Viking suggested using the RapidLock system as a potential solution.

Initially, there were some concerns around whether this system would be fit for purpose, particularly regarding how well the Velcro / RapidLock adhesion system would perform in this application. However, these concerns were quickly put to rest after completing the first 18 lineal metres, which demonstrated how effective the system was.

As the project progressed, the installation proved extremely efficient, saving significant time by eliminating curing periods and making the installation process straightforward.

Within five days, we were able to:

- Remove the existing membrane
- Replaced rotted out areas
- Install the RapidLock system
- Fully complete 120 lineal metres of gutter

All of this was achieved while also working around challenging weather conditions. This timeframe simply would not have been achievable using a traditional adhered membrane.

Overall, the RapidLock system proved to be a highly effective solution, particularly for projects with tight access and time constraints.”

“This system was a pleasure to work with and performed exceptionally well, even on a complex, steeply angled, UFO-shaped roof. Installation was straightforward, with key benefits including reduced concern around moisture ingress beneath the boards—eliminating the risk of bubbling if moisture were present. In cold conditions, the absence of glued surfaces meant condensation was never an issue. This product would be an ideal solution for steep-pitch roofs and it delivers real advantages for winter installations.”
